Implement a global C++ function that takes an array of Cell obj. that represent the cell of a Hex game. Your function will find the Cell with the smallest row number and return it. Assume that Cell class is defined with all necessary setter and getters. Write only the function

```
int find_smallest (int n, Cell arr[]) {  
    int min = n+1;    if (n == 0) return -1;  
    for (int i=0; i < n; ++i) {  
        if (min > arr[i].getRow()) {  
            min = arr[i].getRow();  
        }  
    }  
    return min;  
}
```
